

DIGITAL X-RAYS

With digital x-rays, the images appear on our computer screen within seconds of taking them. No more wait time, and less radiation exposure!

They are reliable for diagnosing decay in between the teeth, and they help us rule out infection at the root (or apex) of the tooth.

PANORAMIC X-RAY

We also have our Panoramic X-ray Machine. This machine was designed to take a picture of your entire mouth with one x-ray. It gives our Doctors the ability to measure sites to place Implants. It is able to detect infection, cysts, tumors or any other abnormal growths on the jaw. It is also great for Wisdom Teeth and Orthodontic Treatment Analysis. It takes less than 8 seconds from start to finish.
